

Policy for the future:

We Nissin group are promoting various initiatives to preserve our mother earth and biodiversity through our logistics business by introducing renewable energy and forest preservation/restoration from global and long-term point of view, based on one of our materialities “Realize a decarbonized society and contribute to an environmentally conscious, circulating society”.

1. OBP recycled plastic pallet

We have introduced plastic pallets since 2023, made from recycled plastic material compounded with 5% of OBP, Ocean-Bound-Plastic : Cast ashore plastic waste on the coast, which leads to ocean pollution.

3. Kanagawa Forest restoration partner

We have been a member of Kanagawa prefecture's program which preserves water source forest and surrounding ecosystems since 2019.

2. Mangrove Planting

Our Indonesia affiliate has joined in the planting program since 2022, engaging in forest expansion and ecosystem preservation in an allocated area of Mangrove forest, which also brought greater awareness of environment and biodiversity to our staff members.

Future Tasks

Further promotion of biodiversity preservation activities and enhance staff member's understanding and awareness of it.

Message to society

Based on our corporate purpose ‘Touch the hearts of all, delivering global happiness and peace’, we Nissin group will contribute to our society through our logistics business and biodiversity activities alongside our strive for sustainability and harmonious coexistence with nature.
