

Policy for the future:

In 2021, the Sankyo Tateyama Group launched sustainability activities with the goal of “Sustainability Vision 2050: Life with Green Technology.”

Our environmentally-themed materiality includes “responding to climate change”, which reduces greenhouse gases, and “effective use of resources”, including aluminum, the main raw material for our business. In our efforts, we take into consideration the preservation of the ecosystem in terms of the use of natural resources and environmental impact. Additionally, the Sankyo Tateyama Group has a production factory in the Hokuriku region. Since 2013, we have been participating in the “Corporate Forest Creation” initiative promoted by Toyama Prefecture, and continue to work to protect the area’s rich natural environment.

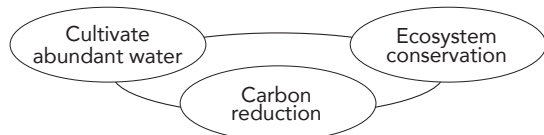

< Specific examples of initiatives >

Twin Leaf Forest Development Activities

- In 2013, concluded an agreement with Takaoka City, Toyama Prefecture on “creating forests that match local vegetation.”

[the purpose]

- By protecting the rich forests in Takaoka City, we will promote the following:

[Activities]

- As part of the “Twin Leaf Forest Creation Activities,” Sankyo Tateyama Group employees and their families will volunteer to plant and maintain trees.
- Participants: 1311 people in total (until April 2023)

[Number of trees planted] 2,500 trees

Tree planting

Cutting of vines

“Twin Leaf Forest” (Takaoka City, Toyama Prefecture)

Over the five years since 2013, we have planted 2,500 broad-leaved tree saplings, and since then we have been working on nurturing them by cutting vines that have become entangled with the saplings.
